

Bike colours: your website and the system disagree

For Dennis, 4 September 2026. One decision needed from you. Nothing has been changed yet.

The situation, in one paragraph

Your bike designer on **logocykler.dk** and the Jensen system each hold their own list of RAL colours — what each RAL number looks like on a screen. Neither is wrong: RAL is a physical paint standard, and every screen version of it is an approximation. But the two lists were built from different sources, and they disagree on **188 of the 191 colours they share**. About half those differences are big enough to see side by side.

That matters now, because we are about to put a picture of the bike on the offer the customer receives. If the two lists stay different, a customer who designs a bike on your website in one colour will get an offer showing a noticeably different one.

The system's side is now settled — it keeps its own list, which is the fuller of the two (216 colours against 191) and the one your existing bike records were already built from.

What we need from you is the other half: may we change your website to match it? If the answer is no, tell us — but then the two stay different, and a customer who picks a colour on your website will get an offer showing a noticeably different one. That is the thing we cannot leave standing.

Important: this changes only what colours look like *on a screen*. It does not change any paint, any RAL number, or anything Metacoat mixes. A screen is never a colour proof — the RAL number on the order is what governs.

1 · The three colours already in your system

These are the ones with a RAL number on your live colour list, so these are the ones that affect bikes you have already recorded.

RAL	COLOUR	YOUR WEBSITE TODAY		THE SYSTEM (PROPOSED)		CHANGE
1006	Maize yellow		#e4a010		#e29000	Visible
9010	Pure white		#ffffff		#f7f9ef	Visible
9005	Jet black		#0a0a0a		#0a0a0d	None to speak of

2 · Where the two lists differ most

If you look at nothing else, look at these. This is the worst case, not the typical one.

RAL	COLOUR	YOUR WEBSITE TODAY	THE SYSTEM (PROPOSED)	CHANGE
6037	Pure green	 #008f39	 #25e712	Big
1014	Ivory	 #e1cc4f	 #ddc49a	Big
1004	Golden yellow	 #cda434	 #e49e00	Big
5010	Gentian blue	 #0e294b	 #13447c	Big
6024	Traffic green	 #308446	 #008754	Big
5002	Ultramarine blue	 #20214f	 #2b2c7c	Big
5009	Azure blue	 #025669	 #2e5978	Big
5001	Green blue	 #1f3438	 #1f4764	Big
5005	Signal blue	 #1e2460	 #154889	Big
1018	Zinc yellow	 #f8f32b	 #faca30	Big

3 · A spread across the rest of the range

RAL	COLOUR	YOUR WEBSITE TODAY	THE SYSTEM (PROPOSED)	CHANGE
1000	Green beige	 #bebd7f	 #cdba88	Slight
1032	Broom yellow	 #d6ae01	 #e2a300	Slight
3005	Wine red	 #5e2129	 #5e2028	None to speak of
4004	Claret violet	 #641c34	 #691639	Slight
5019	Capri blue	 #1b5583	 #1a5784	None to speak of
6013	Reed green	 #6c7156	 #797c5a	Slight
7001	Silver grey	 #8a9597	 #8f999f	Slight
7030	Stone grey	 #8b8c7a	 #939388	Slight
8002	Signal brown	 #6c3b2a	 #7b5141	Visible
9002	Grey white	 #e7ebda	 #ddded4	Slight

4 · What we suggest, and what happens next

Update the website to match the system's list. Reasons: it covers 25 colours the website's list does not; your existing bike colours were already created from it, so nothing in your records has to change; and once both use the same list they cannot drift apart again.

The cost is that **your website's colours will visibly shift** — that is what the tables above are showing you. Nobody but you can judge whether that is acceptable on your public site.

If you would rather keep the website exactly as it looks today, say so — but that is a real conversation, not a shrug, because what we cannot do is leave the two different and still put a truthful picture on the offer.

One related thing, already on your list

The colour named **"RAL 5013"** in the system carries the RAL number **2150**, which is not a RAL number at all. That is on your existing checklist and still needs your answer: is that colour meant to be RAL 5013 (a dark blue), or something else? It is on two orders. The system now refuses new colours with an invalid number, so this cannot happen again — but the existing row still needs a decision.
