

What to fix in the system — a walk through your real data

For Dennis, 3 September 2026 (one note added 4 September, marked below). Everything here was read from **production** — your live data, not a test copy. Nothing has been changed for you.

Each item says where to click. A path like **Bikes → Bike templates → Jeudan** means: the group in the left menu, then the page, then the row. Buttons are named in English here; your login shows Danish, and they sit in the same place.

1 • One idea first: “not marked in the recipe”

You will meet this on a template’s **Paintwork** section. It looks like this — this is your real Jeudan template:

PAINTWORK

What one bike of this template sends to the painter — normally one of each. Priced one bike at a time, the safe assumption for a margin; a batch is cheaper per bike, and the paint order is where the real quantity and the frozen price live.

Part type...

1

+ Add

Part	Qty / bike	Per piece	Line
Frame	2	1-9 365,00 kr.	730,00 kr.
Fork	1	1-9 70,00 kr.	70,00 kr.
Basket not marked in the recipe	1	1-9 185,00 kr.	185,00 kr.
Sign not marked in the recipe	2	1-9 90,00 kr.	180,00 kr.

Paint per bike (estimated, 1 bike at a time, SIK priser 2026 · Metacoat A/S): **1.165,00 kr.**
Per bike in a batch: 1-4 bikes 1165,00 kr. · 5-9 bikes 915,00 kr. · 10-19 bikes 720,00 kr. · 20+ bikes 690,00 kr.

Declared to the painter but not backed by the recipe: Basket, Sign. No part in this template's parts list is marked "Paintable as" that type, so the price above counts it while stock coverage and the workshop floor never flag it as needing paint. Fix it on the part: Parts → the part → Edit → Paintable as.

Jeudan's Paintwork section. The amber text is the app telling you something is declared but won't happen.

There are two separate statements about paint, made in two different places.

	WHERE	WHAT IT DOES
<i>“One of these sends a frame, a fork and a basket to the painter”</i>	the template’s Paintwork section, above	prices the paint job → your margin
<i>“ JP-BA26H is the thing the painter calls a basket”</i>	Parts → the part → Edit → Paintable as	moves the real part → your stock

The first is money. The second is stock. “*Not marked in the recipe*” means you made the first but not the second, and the effect is sneaky: **the price counts it, but the workshop never sees it**. Your margin looks right, while coverage says the bike is fully covered and nobody is told the basket needs painting.

The second statement is made here, on the part itself:

Paintable as

Not decided ▼

Which of the painter's part types this is (frame, fork, cargo bed...). Makes the part pickable on a paint-order line; a stock paint order coming back creates a painted variant of it per colour.

Parts → the part → Edit. It says "Not decided" until you set it.

Two different causes, two different fixes. Either the part is in the recipe and nobody marked it — fix it on the part, above. Or **there is no such part in the recipe at all**, and marking something cannot help: the part has to be added to the template's parts list first. Both cases are below, and one part doesn't exist in the system at all.

2 · Wrong — please fix

Jeudan says it sends TWO frames to the painter. A bike has one, every other template says one, and the recipe holds one. You can see it in the picture above: $2 \times 365,00 = 730,00$ kr. So Jeudan's paint cost reads **1.165,00 kr. instead of 800,00** — 365 kr. per bike of cost that isn't real. → **Bikes → Bike templates → Jeudan → Paintwork**, change the 2 to a 1.

Five paint lines have no part behind them, across three templates:

TEMPLATE	DECLARES	WHAT THE RECIPE HAS	WHAT TO DO
Jeudan	Basket x1	JP-BA26H Alloy basket hotel model	Is this the one that gets painted? If yes, mark it
Jeudan	Sign x2	nothing	no sign part exists at all — one must be created
Svajer classic	Sign x1	nothing	same
Svajer cargo F 350	Sign x1	nothing	same
Svajer cargo F 350	Fork x1	no fork in the recipe	add the fork to the parts list

→ **Bikes → Bike templates → [the template] → Paintwork** to see the amber note; → **Parts → All parts → [the part] → Edit → Paintable as** to fix the marking.

Three templates send nothing to the painter, but their parts say otherwise. Norma CS , Norma FS and Svajer F declare no paintwork at all, yet their recipes hold parts already marked paintable (2, 2 and 4). Their cost-to-produce shows **no paint cost**, so the margin on them is overstated. Svajer F is the one you have been quoting from. → **Bikes → Bike templates → [the template] → Paintwork → Add.**

A colour contradicts itself. The colour named "**RAL 5013**" carries the RAL code **2150**. RAL 5013 is a blue; 2150 is not a RAL code at all. One of the two is wrong, and this colour is on two production orders. → **Admin → Lists → Colours**. The row now shows a warning triangle, and the app will **not let you save it until the code is a real one** — so decide which half is right before you open it: is this colour the blue RAL 5013, or something else? (New colours can no longer be saved with a code that isn't in the RAL deck, so this cannot happen again.)

Red and Purple have no RAL code, so the painter cannot reproduce them and the price list cannot match them. Same place.

A test bike is in your real stock: frame number Jp -test 1 , *in stock*, built on MO-2026-0014. It counts as a bike you own. → **Bikes → All bikes**, search test .

93 "test" displays count as real stock. JP-AND-DSP-NTC — both stock entries have the reason written as just "*test*", about **26.000 kr.** at the recorded cost. Real, or should they come off?

3 · Your call — nobody else can decide these

Two mudguard sets are undecided. Everything points to **Not painted**: JP-Ni42 is polished stainless and no current template uses it; JP-SKSA46 is SKS bought black, and the four templates using it declare no mudguard paintwork. Marking them closes the category so a future bulk action can't sweep them up.

Six baskets are undecided, but two obviously never see a painter — JP-JB01 is a bag, JP-C040 a reflective cover. The real question is only JP-BA26H and JP-BasJen .

Two templates are priced very differently from the rest. Jeudan sells at 5.000 kr. against 2.166 kr. of parts; Svajer classic at 10.000 against 2.922 — where the Normas and Svajer C sit at 16–19.200. Right, or a placeholder nobody revisited?

4 · Blanks that quietly change the numbers

Not broken — blanks that make the app answer conservatively.

- **169 of 172 parts have no origin** (EU / outside EU), so every new purchase line assumes **no import duty**.
- **11 parts have no HS code** → 0 % duty frozen onto any purchase of them. Three are in stock: JP-BasJen (499), JP-SP207-27,2 350 (297), JP-AND-DSP-NTC (93). Check with the customs broker first — two codes carry **48,5 % anti-dumping** and six parts already sit on them.
- **JP-BasJen : 499 baskets with no cost at all**, counted in stock and valued at zero. An estimate beats nothing.
- **166 supplier prices missing** → a drafted purchase order comes out at 0 kr.
- **No part has a reorder point**, so every low-stock warning runs off a rule of thumb (at or below 20 % of the last purchase quantity).
- **17 active suppliers have no e-mail**, so you cannot send them an order.

5 · Loose ends to close

- **PNT-2026-0008** — a paint order left *planned* since 1 September, **no colour chosen**, five lines naming no part. Finish or cancel it.
- **MO-2026-0015** — *planned* since 28 July: 4 planned, 1 built, 3 bikes still sitting in planning.
- **PO-2026-0059** — placed with Shimano Nordic on 17 June, never received.
- **PO-2026-0060, PO-2026-0063** — June and July drafts with no lines.

6 • Know this, nothing to do

- **Your paint shelf is empty, and that is correct.** No painted stock exists in production yet. PNT-2026-0005 did come back in July, but it predates the painted-stock feature so it created none. The shelf fills from your next paint order.
- **Coverage will start saying a bike needs paint.** Now that frames and forks are marked, an order that used to say "all covered" will say "*N parts need paint*" — and block the build until they return. That is it working.
- **Metacoat's e-mail is still Nazar's test address**, deliberately, until the flow has run for real once.
- **Total stock value reads about 2.545.000 kr.**, not counting those 499 baskets at zero.
