

Repairs in Jensen FMS — your guide

For Finn, September 2026. How to record a repair from your phone: find the bike, start a work order, write or dictate what you do, and mark it done. The office adds the prices afterwards. You see no prices, and that is intended. We will go through it together on Tuesday.

The Danish version is the one to use; this English copy shows the same screens in English.

1 • Sign in

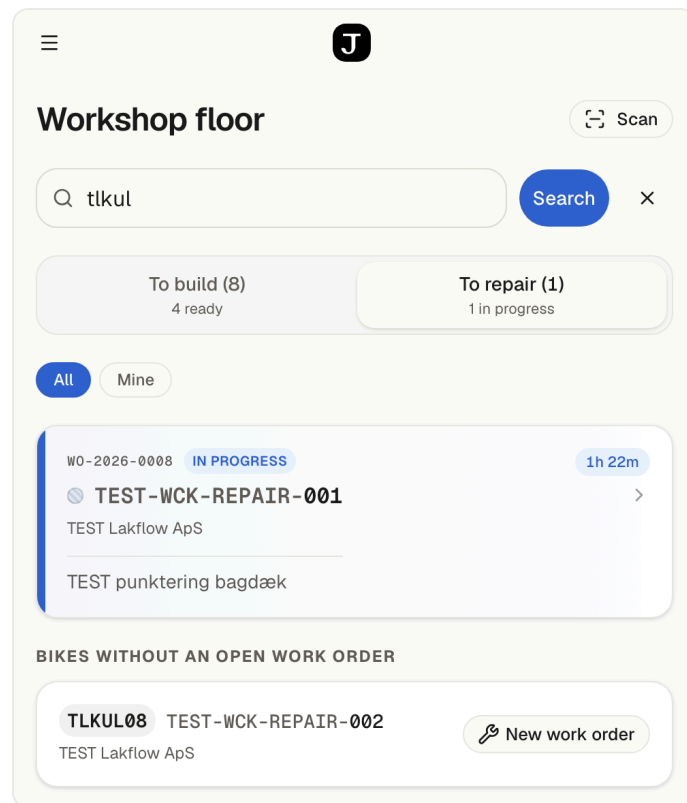

1. Open **jensen-fms.vercel.app** on your phone. Tip: add it to the home screen so it opens like an app.
2. Pick **your name** and type **your password**. You get it on Tuesday.
3. You land on the **Workshop floor**. The menu (≡) has *Bikes*, *Parts* and *Work*. That is all you need.

2 • Find the bike

There are two ways. Use whichever is quicker:

- **Scan:** tap *Scan* and point the camera at the QR sticker on the bike.
- **Search:** type in the search box on the *Workshop floor* and tap *Search*. You can search by
 - **the code on the bike's label**, e.g. *BKTM01*. You can type it the way the customer says it: *"bktm 1"* also finds BKTM01;
 - part of the **frame number**;
 - **the customer's name**, e.g. *Kolding*;
 - **the work order number**, e.g. *WO-2026-0008*.

Bikes that already have an **open work order** are listed at the top. Tap the card to carry on with it. Below them are **bikes without an open work order**.

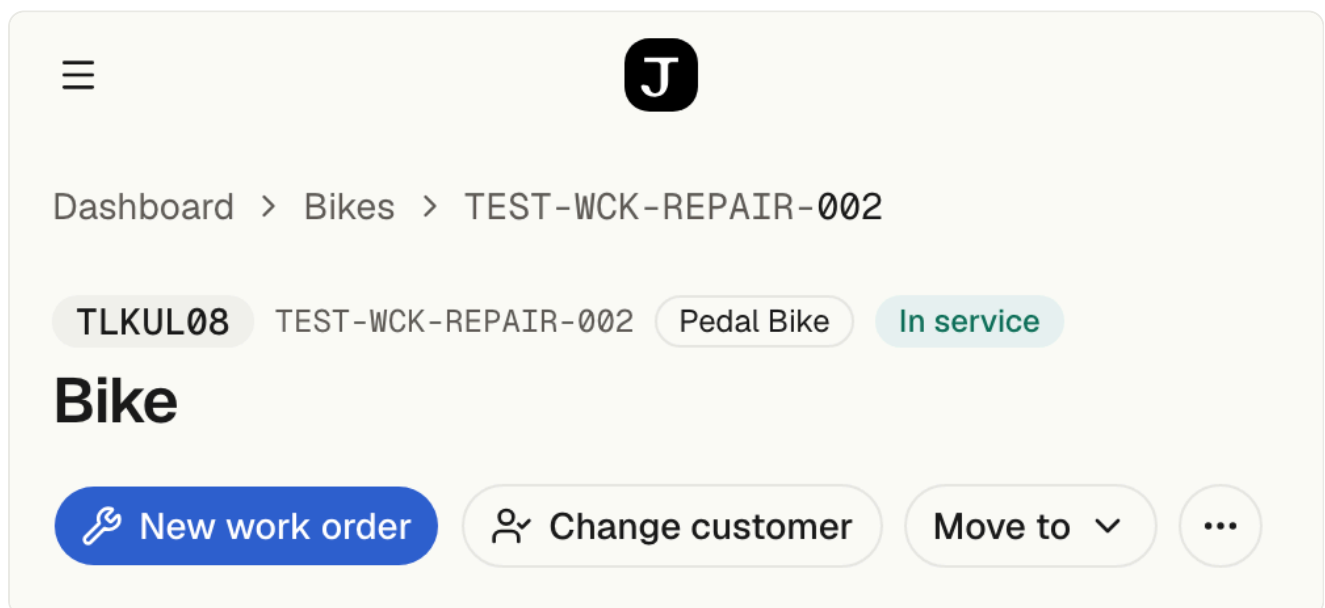

Searching "tlkul": a work order in progress at the top, and a bike without one below it with a New work order button.

3 · Start the work order

Tap **New work order**. It is in the search result, and at the top of the bike's page, where a scan takes you. The work order opens straight away.

If the bike already has an open work order, the button reads **Open WO-...** instead and takes you to that one. The system never makes two for one bike.

The bike's page after a scan: the code, the frame number and the New work order button.

4 • Work on the bike

Tap **Start work** at the bottom when you begin. The clock starts, and the band at the top turns blue and shows when you started.

- **Diagnosis:** what is wrong with the bike?
- **Work performed:** what did you do?

Type it, or tap **Dictate ...** and say it. The text appears with the time in front, so each dictation becomes its own entry. The microphone key on the phone's keyboard works too.

The screenshot shows a mobile app interface titled 'Queue'. At the top, there's a blue bar with 'IN PROGRESS' and 'STARTED 19:50 · 1H 22M AGO'. Below this, a white box contains the work order ID 'W0-2026-0008' and the title 'TEST-WCK-REPAIR-001' with a blue circular icon. A link 'TEST Lakflow ApS' is also present. The main content area has two sections: 'DIAGNOSIS' and 'WORK PERFORMED'. The 'DIAGNOSIS' section has a yellow warning icon, the title 'DIAGNOSIS', and the prompt 'What's wrong with the bike?'. It contains a text input field with 'TEST punktering bagdæk' and a 'Dictate diagnosis' button with a microphone icon. A tip below says 'Tip: the mic key on your phone's keyboard also works.' The 'WORK PERFORMED' section has a green checkmark icon, the title 'WORK PERFORMED', and the prompt 'What did you do? Parts replaced, adjustments, observations.' It contains a text input field with a timestamp '[2026-09-27 21:05]' and the text 'TEST skiftet slange bag, dæk tjekket, bremsen justeret'. It also has a 'Dictate work performed' button with a microphone icon and the same tip.

The work order: diagnosis and work performed, each with a dictate button.

5 • Time spent

Enter how long the repair took, in **hours** and **minutes**. You don't have to type:

- **+15 min**, **+30 min** and **+1 h** add time;
- **Since start** fills in the time since you tapped *Start work*;
- **Clear** empties the field.

Tap **Save**. It says *Unsaved changes* until you do.

6 • Parts and photos

- **Add parts:** pick the parts you actually used. They come off the stock count straight away. If you picked the wrong one, remove it with the bin.
- **Take photo:** when something needs explaining, e.g. a broken part.

7 • Mark done

Tap **Mark done** at the bottom. The system asks once more and shows the time you recorded. If it says no time is recorded, tap *Cancel* and fill it in first. Then tap **Confirm — finish**.

A finished work order **cannot be reopened**. If the bike needs more work, start a new one.

The Mark done button at the bottom of the work order.

Good to know

- **You see no prices**, for parts or hours. The office adds the rate and makes the invoice.
- **Can't find the bike?** It may not be in the system yet. Write down the frame number and the customer's name and give them to Dennis.
- **Something doesn't work?** Call Nazar.
