

The fleet list — how to fill in the spreadsheet

For Dennis, 24 September 2026. This goes with the spreadsheet *FLEET-LIST-DENNIS-2026-09.x/sx*. It is how the bikes already out with your customers get into the system, so repair orders can be attached to them.

Before you start: if the information already exists somewhere — customer Excel sheets, delivery notes, e-conomic exports — send that instead. Don't retype it; I will do the sorting. Use the spreadsheet for what lives only on paper or in your head.

The four tabs

TAB	WHAT IT IS	YOU...
How to fill in	this page, in short	read it once
Bikes	one row per bike	fill it in
Agreements	one row per scanned service agreement	fill it in
Customers	every customer already in the system	look things up — don't edit

Bikes — one row per bike

Not "10 × white Norma" on one line — ten lines. Each bike gets its own repair history, so each one needs its own row.

Only the two orange columns are required.

COLUMN	REQUIRED?	WHAT TO PUT
Customer	yes	Pick from the drop-down
Site / department	if it matters	The building, depot or hotel the bike lives at
Frame number	yes, if known	The <i>stelnummer</i> . Leave blank if nobody knows it
Customer's fleet number	optional	The number the customer painted or stuck on the bike themselves
Model	optional	Pick, or type an older model
Colour	optional	Pick, or type an older colour
Delivered (year)	optional	Roughly is fine
Status	optional	<i>In service</i> unless you know it is retired or stolen
Lock, battery, charger number	optional	Only if it is written down somewhere
GPS / tracker	optional	IMEI or AirTag, for bikes that have one
Other IDs	optional	Motor, display, QR — anything else printed on the bike
Notes	optional	Anything that does not fit the columns

Three rules that save us both time later:

1. **A blank is fine; a guess is not.** A wrong frame number is worse than a missing one, because the system will trust it.
2. **Unknown frame number? Still add the bike.** Fill in what you do know — customer, site, fleet number — and leave the frame number blank. Finn confirms it the first time the bike comes in.
3. **Pick the customer from the list, don't type it.** A few names appear twice — *Rigshospitalet*, *Herlev SSP*, several *Nybolig* offices — so the list shows the e-conomic customer number after each name. That number is how I match the bike to the right customer. If a customer is not in the list at all, type the name and I will add them.

Model and Colour offer the current models and colours. An older bike may be a model or colour that isn't listed — just type it. The sheet asks once whether you meant to; say yes.

Agreements — one row per scan

Scan each service agreement that is **still running** to PDF (a phone scanner app is fine), one file per agreement, and name the file after the customer. Then give each file a row here, so nothing gets lost between the scan and the system.

COLUMN	WHAT TO PUT
Customer	Pick from the drop-down
Site / department	Only if the agreement is for one site, not the whole customer
Scan file name	Exactly as you saved it, e.g. <i>Rigshospitalet 2024.pdf</i>
Still active?	Yes / No / Not sure
Covers ALL their bikes?	Yes / No — if No, say which bikes in Notes
Notes	Anything agreed that isn't written in the paper

I read each agreement into the system myself and send you a short summary to check — you don't have to type out what the agreements say. The one column that really matters is **Covers ALL their bikes?**: today the system assumes an agreement covers every bike the customer (or that site) has, and I need to know about any that don't before anything is loaded.

When you're done

Send me the spreadsheet and the folder of scans. I load one customer first, all the way to a test repair order, show it to you, and only then do the rest.
